

## Printronix Launches the Next Generation of Their Zero-Tear Line Matrix Printer Offerings

Printronix's Zero-Tear offerings are designed for those who are looking to combine zero-tear flexibility with the unmatched dependability of a line matrix printer.

October 1<sup>st</sup>, 2013

Printronix Inc., a worldwide leader in business-critical printing solutions, today gave IT buyers worldwide a compelling reason to select line matrix printing technology over serial matrix for on-demand transaction oriented printing.

The Printronix P8000ZT and TallyGenicom 6800ZT Zero-Tear offerings are specialized cartridge line matrix printers designed for businesses using multi-part and serialized documents that require print on demand, single form tear-off usability. The Zero-Tear functionality allows users to eliminate forms waste and reduce operating costs. Through its unique tractor configuration, the ZT models push single or multi-part media through the hammer bank and eject it up to the tear bar upon job completion.

These new P8000 or 6800 ZT models offer an improved enclosed pedestal design reducing noise emission, and are available in 500 or 1000 lpm configurations, either of which will outperform and outlast any serial matrix printer offering. In addition, these models feature a cartridge ribbon consumable, capable of outlasting most serial matrix ribbons 3 to 1, that requires less user intervention and aids in delivering exceptional cost of ownership.

From a Remote Management standpoint, PrintNet Enterprise (standard on all Printronix & TallyGenicom line printers equipped with Ethernet) is second to none in providing IT personnel with real-time visibility to printer status and ribbon life for every printer on the network. When configuration or firmware updates are required, PrintNet Enterprise allows for multiple printers to be updated simultaneously, as opposed to connecting with each printer individually, minimizing time and the potential for errors.

Lastly, the advanced ribbon monitoring system, standard on all Printronix & TallyGenicom line printers, allows users to set the end of life threshold for the cartridge ribbons, which maximizes consumable life while ensuring acceptable print quality.
